

CVRS|TEH SUPPLEMENTAL EYECARE SYSTEM

You've probably been hearing about T&T's Parallel Healthcare System to deal with the current COVID-19 Pandemic, In many ways, CVRS|TEH functions similarly but as a supplemental eyecare system.

We know that eye clinics in the hospital and health centres are currently suspended and we've taken measures, through our Subsidized Pricing (SP) Program, to support the patients from these clinics. We hope to ensure that everyone has access to not only quality eyecare, but also affordable eyecare.

At CVRS|TEH, we provide comprehensive eyecare from detection to treatment and surgery for cataracts, glaucoma and all things related to the retina. Our three conveniently-located clinics are fully equipped to provide all the necessary scans and tests. Our eyecare model of "Screen- See – Treat" fully encompasses all aspects of eyecare and includes our optometrist, optical dispensary and even free diabetic eye screening.

Consultant Ophthalmologists: Dr. Dorian Dwarika, Dr. Ronnie Bholia, Dr. B Vineeth Kumar

CVRS|TEH clinics are run by three highly qualified and very experienced consultant ophthalmologists, who, when combined have had over 45 years of experience. These consultant ophthalmologists are supported by highly qualified technicians, graders, screeners, clinic aides and three medical doctors who also function as residents of ophthalmology.

In these uncertain and somewhat worrying times, we know that many persons are anxious and apprehensive about leaving their homes and venturing out especially to a medical facility. However, it is imperative that your eye care is not postponed or neglected. Many times, treatment and related expected results are time sensitive, which means that you can do more harm than good if you postpone treatment for too long.

We are committed to following COVID-19 safety protocols and have taken many extra measures to ensure your safety, but also the safety of our doctors, clinic aides and all staff. We implore you cooperate and also follow the necessary COVID-19 protocols.
